The very idea of North and South has permeated American political and social discourse. Yet few people realize the impact that literature has had in this discussion and debate.

A scholar who understands the cultural importance of literature is Catherine Nelson, a professor at University of Illinois at Urbana-Champaign. North and South, she says, is the best example of it. "This book is a very powerful example of how literature has shaped our imagination of the South," she said.

"Growing up in northern Virginia was a very formative experience," Nelson said. "I can only imagine what it would have been like to be born there, I had an English accent, but I never felt like I was part of anything." She went on to explain that literature has had a significant impact on the way people think about the south.

"There are real and profound differences between the North and South," she said. "Many people have opinions, from simple things such as making a good sandwich, to historical and political questions. We are dealing with understanding of race and gender issues."

Nelson is in the process of writing a book about the topic. "I have found that people in the north and south are very different," she said. "They are very different in their approach to race and gender issues."

"The main advantage is that we are able to look at the differences between the north and south differently," she said. "There is a very distinct advantage to looking at the differences between the north and south differently." She went on to say that people in the north and south have different approaches to race and gender issues.

"The disadvantage is that you are often forced to compare the two," she said. "People in the north and south often have the same approach to race and gender issues."

"Since Conroy is still alive, you never know what will happen," she said. "People are always looking for writing of a book that will make them think differently." She went on to say that many people are always looking for writing of a book that will make them think differently.

"I have seen her work being shown at a book fair," she said. "Very few people know how many of them will be written by scholars or writers, but I hope that they will see the work that she is doing and continue to come back." She went on to say that many people are always looking for writing of a book that will make them think differently.

"I am very excited," she said. "I am very excited about the work that she is doing." She went on to say that many people are always looking for writing of a book that will make them think differently.

Nelson is also the author of "The Art of the Novel," a book about the role of literature in shaping our understanding of the south. She said that the book is still in its early stages, but she is very excited about the work that she is doing.
