The Democrats have made a number of concrete promises aimed at keeping the voters with the presidential elections. They promise concrete actions against climate change, increased funding for public education, and comprehensive health care that includes comprehensive support for survivors, fair and equal pay for all workers, and an end to biases against females as “incubators,” and increased supports for women in the workplace. The Clinton campaign also promises support for educational equity for students, which is the key area that should enable access to all content and applications of higher education, for example, to particular products or websites. The Democratic plan is to increase the access of all students to broadband Internet to all academic and research databases.

Democrats also promise reform of the immigration system, such as a change in the green card status (permanent residency status) to students with STEM (science, technology, engineering, and mathematics) degrees and creating a startup visa program for foreign entrepreneurs.

They also endorse updating the copyright system, with limits on the copyright held by the federal government. This will open access to all publications for educational and academic libraries.

In the Education section, the campaign promises broadband Internet to all academic and research institutions for free, with the goal of making the Internet a public utility.

On the other hand, the Trump campaign promises to increase funding for public education, with an emphasis on individual schools. They also promise to increase the tax on foreign companies and to reduce the deficit by $1 trillion over 10 years.

Dr. Aldemaro Romero Jr. Letters from Academia

What Democrats have planned for higher education

The Democrats have planned for a number of concrete improvements for higher education, which include:

1. Funding for public education: The Democrats promise to increase funding for public education, which is currently only about $7.5 million per year from the state because of changes to bursements to school districts. This number is still continuing this year, and it’s actually worse now.

2. Student finance: The district that the student is in instead of getting $6.7 million like last year, will receive $6.2 million this year. “So in essence it was a situation, would have received $6.7 million in funding. But with the new formula and the new state, it has stabilized its financial outlook. But, "It's just that District 7, instead of getting $6.7 million like last year, will receive $6.2 million this year."

3. Government funding: The government funding is improved this year, with the state funding due to the new state funding formula.

4. Teacher salaries: The teachers' salaries are expected to be cut in half due to state require-ments. This proposal is important because price and rankings - that influence decisions at tuitions.
